About me

06/22/1999

Niterói, RJ

Graduation:

2018 - 2022

Since I was little I always liked to challenge myself and do things that other people find difficult. No matter how long it would take or what I would stop doing to complete that goal. I have always had contact with some type of technology like computer, cell phone and games, which helped me to develop mathematical and logical skills. I am always willing to learn new things and spread knowledge around the world. I participate in forums of doubts, study groups and try to be developing a new project every day.

Work Experience

Módulo Ignição
2020 - 2021

Software Developer
It was in this program that I improved my software development skills by creating innovative solutions with multidisciplinary students to real problems faced by Petrobras, using technology, Scrum and CBL.

SmartCar
2019 - 2020

Software Developer
This project had the goal to bring more security to people who travel with Uber, using facial recognition algorithm. This was my first professional project using Python.

Hackathon CCR [6th place]
2020

Front-end Developer
We developed Agilicar, an application that streamline the loading and unloading process through online receipt of invoice. This project was subsequently of interest to the Mercedes Benz company, which contacted the group.

Mega Hack 3.0 [2nd place]
2020

Front-end and Back-end Developer
We developed Liv, an application that helped children with restricted access to the internet and books from school to read them via WhatsApp.

Technical Skills

Team Leadership	Programming Logic	Innovation
Team Work	Computer Vision	Linux
Design Thinking	Web Development	Ethical Hacking
Data Analysis	CBL	Computer Network
Product Development	Scrum	Cybersecurity

Languages

Python — 1 year of experience in professional projects

HTML — 2 year of experience in personal projects and hackathons

CSS — 2 year of experience in personal projects and hackathons

JavaScript — 2 year of experience in personal projects and hackathons

Education

Python Course
2018

This course starts in the basics of Python and goes up to the medium level. After I finished, I was able to solve problems and challenges, in addition to developing my personal and professional projects.

Web Development
2019

This is a complete Web Development course that starts in HTML, CSS and JavaScript and goes to the Database and deployment of your web application. Helped me a lot in the development of my personal projects and in hackathons.

GoStack - Rocketseat
2021

GoStack is an online, practical and intensive training that deeply studies NodeJS, ReactJS and React Native technologies. This bootcamp has helped me a lot to develop more and more my technical and personal skills.
